PROFESSIONAL SUMMARY

Full-stack developer and technical lead with 7+ years building enterprise web & mobile systems using Next.js, React, React Native, Django/DRF, PostgreSQL and AWS. I lead large, distributed engineering organisations and pair deep technical delivery with commercial outcomes — feasibility studies, pitch decks & cap-tables, GTM strategy and client negotiation. I've shipped AI features and RAG systems that power product personalization and knowledge retrieval. I'm targeting Highbrow Technology to bring hands-on senior python engineering plus systems-integration and client-facing product strategy to enterprise clients.

CORE SKILLS

- Frontend: Next.js, React.js, React Native, Expo
- Backend: Python, Django, Django REST Framework
- Data & Infra: PostgreSQL, RDB design, AWS (EC2, S3, RDS), Docker, CI/CD
- AI: RAG (Retrieval-Augmented Generation) systems, OpenAI integrations, recommendation engines
- Business: Feasibility studies, pitch decks, cap-tables, client scoping & proposals, GTM planning
- Tools: Git, GitHub Actions, Figma, Jira, Trello, Cloudinary

PROFESSIONAL EXPERIENCE

Head of Software Development and Interim Business Development Officer — RIS International (remote, India) (Jun 2025 – Dec 2025) Led a cross-functional organisation of 400+ (software engineering, DevOps, marketing, social media, creative design) delivering enterprise apps and managed services for clients. Technical duties: architected and deployed applications with hosting, implemented CI/CD, performance monitoring and security hardening. Business duties: conducted business feasibility studies for new product lines; produced executive reports and ROI projections used by leadership to prioritize investments; acted as senior client liaison for scoping, SLAs and delivery commitments. Delivery results: established sprint cadence across multiple squads, reduced deployment incidents through automated pipelines, and aligned product roadmaps with commercial KPIs.

Award: Certificate of Recognition | Best Team Lead

Chief Technology Officer — Talentta.Africa (Apr 2025 – Present)

Leads the dev team through building and scaled the Talentta platform (Next.js frontend, Django/DRF backend, PostgreSQL, AWS). Grew the platform from zero to 11,320 active users in 7 months. Developed and deployed RAG (Retrieval-Augmented Generation) pipelines and search/retrieval systems used for personalized learning recommendations, resume parsing and intelligent job matching. Business duties: led market validation, GTM strategy and partnership outreach that secured early user growth; created investor-grade pitch decks and product collateral used in partnership conversations, orchestrated and engineered integrations.

Founder & CEO / Lead Developer — ArtizanSquare (2024 – Present)

Built a full-stack marketplace connecting service providers (artizans) with customers using ultramodern dev tools, led product architecture and monetization strategy.

Business Development Intern / Graphics Designer / Software Engineer— Emmviron Inc. (2021 – 2025 (concurrent))

Delivered API ecosystems, backend services and integrated marketing automation for product commercialization. Business duties: planning and execution of client workshops, feasibility reports, project proposals, market intelligence reports and graphics design deliverables; converted technical requirements into clear commercial deliverables.

Freelance Developer & Client Projects (2017 – Present)

Recent freelance side project: Hostel Management App (React Native + Expo + Django + PostgreSQL), completed a few months ago (2025). Scope included client negotiation, requirement gathering, delivery and training. Built 100+ client websites and dashboards (WordPress, HTML, Liquid, React), often representing clients in negotiations and partnerships — sharpened client-facing and deal-closing skills.
